

Design The City

The theme of DesignMcr 2016 is 'Design City'.

DesignMcr is celebrating the part design plays in making Manchester and other cities great to live in. Not just our architecture, culture and world-class media, but the growth of start-ups and studios in creative tech, shops for a design-conscious generation and the return of craft in everything from beer to print in the new culture of making.

Code brief for DesignMcr

We are inviting coders to 'design the city' - to create something new for Manchester, a new addition or an update of something existing. This could be a building, a statue, a logo or coat of arms, a new way of getting about the city, an electronic soundtrack for anything you can think of in Manchester!

This design can be created in:

- * RobLox
- * Scratch
- * Python
- * Minetest
- * Or any other digital platform you can think of!

You can either code these ideas in your own time and submit them to submit@sharpfutures.org.uk or create them live at Manchester Coder-Dojo at The Sharp Project on Sunday October 16th where the session will end with a showcase of the highlights.
